Hello Lee,

You asked me to let you know two months after we purchased the security camera system from you, what we thought and how we felt about the investment.

We are very pleased with our investment of your camera recording system.

We utilize the camera primarily for the purpose of welding. We use the cameras to make it possible for one operator to operate two welding torches at once. We weld spiral pipes both internally and externally without having to leave the welder's control panel.

We can now see the weld well enough to move the torches right or left in order to keep the welding torch at the exact welding position. We have also saved time when it comes to cleaning nozzles and changing tips. We now don't have to go into the pipe until we know that we need to.

In the past we would have to hope and guess, like everyone else, when we decided to stop welding and clean nozzles and change tips. We have one welding torch inside of the pipe line and one on the outside. There for, we have to into the pipeline to reposition or do any work on the torch. This was very time consuming before the use of your camera system.

The system is also very useful for quality control. This is of paramount importance to our company.

Thank you and your team for your efforts. We will recommend your services to others.

Regards,

J. Richardson
